🌐 alice1989123

AI Engineer and Full-Stack Developer passionate about machine learning, cloud-native architectures, and automation.

Education

- 2020 **M.Sc. in Mathematics**, UNAM, Mexico City
2019–2024 **Ph.D. in Mathematics (dissertation in progress)**, UNAM, Mexico City

Technical Skills

- | | |
|--------------------------|---|
| ML & AI | PyTorch, TensorFlow, Scikit-learn, LLMs, LangChain, OpenAI API, time series forecasting |
| Cloud & DevOps | AWS (certified), Docker, Kubernetes, Git, Kafka, REST APIs |
| MLOps & Data Engineering | Linux, Apache Airflow, ETL, Selenium, BeautifulSoup, Apache Spark |
| Full-Stack | Python, Node.js, React, Angular, TypeScript, HTML/CSS |
| Databases | PostgreSQL, MySQL, MongoDB, Oracle, Elasticsearch |

Experience

- Nov 2025 – Present **Data Architect (Full-time)**, Grupo Salinas, Mexico City
- Lead Data Architect for the Guardian System and Audit (Auditoría) platform, owning the end-to-end AWS data architecture and delivery roadmap.
 - Led a team of backend and data engineers, coordinating architecture decisions and implementation for AWS Glue-based data pipelines.
 - Designed AWS Glue pipelines for ingestion and transformation of transactional data into analytics platforms (e.g., Redshift), emphasizing reliability, scalability, and governance.
- Aug 2022 – Nov 2025 **AI Consultant (Full-time)**, Grupo Salinas, Mexico City
- Built ETL pipelines and anomaly-detection models using Elasticsearch, application logs, and PRTG sensors for a Digital Banking AIOps initiative to detect application and server malfunctions. Contributed to aggregating application error codes in Elasticsearch and strengthened expertise in anomaly prediction.
 - Developed internal AI dashboards in Angular and implemented JWT-based authentication APIs for the Digital Banking AIOps project. Strengthened Angular skills and learned .NET.
 - Analyzed large datasets with PySpark (branch and ATM cash movements) to tune parameters that optimized cash distribution across branches. Deepened PySpark expertise.
 - Developed stored procedures as part of migrating processes from SAS to an Oracle Data Warehouse for the Collections project. Deepened SQL and Oracle expertise.
 - For the Guardian System in the Audit area, developed AWS-based messaging and ETL components using Lambda, Elastic Container Service (ECS), and Kafka to ingest transactional data into Redshift for downstream analytics.
 - For the Infobionic project, deployed and maintained a hybrid Kubernetes cluster (Windows/Linux) hosting 18 client applications. Later migrated applications to AWS using ECS and managed infrastructure as code with CloudFormation and AWS CDK. Also built CI/CD pipelines with CodePipeline, CodeBuild, and CodeCommit.

- Apr 2021 – **Backend Developer**, *Fluid Tokens*, Remote, Full-time
Feb 2022
- Designed and implemented RESTful APIs in Node.js with MongoDB.
 - Integrated DeFi services on blockchain.
 - Company website: fluidtokens.com.

Selected Projects

- Aug 2023 – **Gatsbyt — On-chain Analytics & ML Forecasting Platform (Personal Project)**, Mexico City / Present Remote
- Built CI/CD automation with Jenkins pipelines for reproducible builds, tests, and deployments across services.
 - Developed time-series forecasting models in PyTorch and automated training workflows; tracked experiments and model bundles with MLflow.
 - Designed orchestration using Apache Airflow to schedule and monitor ingestion, feature generation, training, and daily inference jobs.
 - Implemented on-chain analytics pipelines in Apache Spark, processing raw blockchain blocks data into daily aggregated metrics for downstream analysis.
 - Built a news ingestion pipeline that scrapes web sources and generates structured summaries using local LLaMA inference for sentiment/context features.
 - Orchestrated the platform at the infrastructure layer with Kubernetes (batch jobs, services, scheduling), enabling scalable and repeatable operations.
 - Hosted the frontend and API on AWS, integrating the data and ML services into a production-style architecture.
 - Website: gatsbyt.com — GitHub: github.com/alice1989123
 - Repositories: gatsbyt, crypto-strategies, airflow_dags, binance-etl, crypto-news-summarizer, bitcoin-etl

Certifications

- **AWS Certified Cloud Practitioner**: fundamentals of AWS services, cloud concepts, and best practices.
- **AWS Certified Solutions Architect – Associate**: designing resilient, secure, and cost-efficient architectures on AWS.
- **AWS Certified Developer – Associate**: building applications on AWS using CI/CD, containers, and managed services.
- **AWS Certified Data Engineer – Associate**: ingesting, transforming, and orchestrating data at scale in the AWS ecosystem.
- **AWS Certified SysOps Administrator – Associate**: operations, monitoring, automation, and reliability best practices on AWS.
